FOGCO®

Outdoor Cooling

INTERFOG® systems are being effectively used in outdoor cooling applications worldwide.

Our systems can provide cooling of outdoor temperatures by up to 10°C with no noticeable increase in humidity.

By using a FOGCO® 70 Bar pump module, the system can produce billions of water droplets as small as 5 microns*. These microscopic water droplets then flash evaporate which reduces the temperature in the surrounding area.

*1 micron = 1 millionth of a metre

Mistscaping®

Mistscaping® is a unique and exciting way to add fog to standard water features and garden areas. Created and developed by FOGCO® Mistscaping® allows for the subtle and mystical introduction of fog effects into any outdoor application.

By utilising the FOGCO® pump module and specially designed Mistscaping® risers, any standard landscaping project can be transformed into a cooling tropical experience.

FogDeck®

FogDeck® represents the latest innovation from FOGCO®. This patent pending system is a dramatic water feature for the most discriminating of homeowners and all upscale pool projects. The FogDeck® system allows for a distinctive introduction of fog effects into any new or remodelled pool.

By utilising a FOGCO® 70 Bar pump module and specially designed prefabricated assemblies, any pool project can be transformed into a unique and mystical design.

Commercial applications

INTERFOG® applications include major dust abatement, odour removal and large scale greenhouse humidification systems. Cooling, Mistscaping® and FogDeck® applications include restaurants, hotels and resorts, theme parks, as well as residential patios, gazebos, pools, spas, tennis courts, and waterfeatures.

Whether commercial or residential, INTERFOG® is the only manufacturer in the industry to provide both UL and CE certification ensuring years of trouble-free operation backed by our 18 year history of quality products and customer service.
